Marine Refrigeration

Flynn Refrigeration can provide marine refrigeration service engineers who can attend vessels and carry out a wide range of services.

Our engineers are available to attend vessels throughout the UK, and with a wide network of refrigeration engineers around the world, we can attend many large key ports, which ensures costs are kept to a minimum, and to avoid excessive travel costs.

Our range of services include:

- Compressor overhauls
- Conversion of refrigeration and air conditioning systems with a wide range of new refrigerants
- Breakdown and trouble-shooting
- Leak detection and pressure testing
- Installation of new air conditioning plants and refrigeration systems
- Annual inspections to ensure systems are kept in optimum condition
- Electronic control systems and upgrade by our specialist technicians

General Information

Our aim is to ensure that a suitable engineer is deployed to your vessel from the nearest point, is on board as soon as possible and fully understands the work to be completed. Ideally, a 5-7-day notice period is required to ensure the most suitable engineer attends the vessel.

We are dedicated to providing a cost-effective service; all engineers are charged at a daily inclusive rate, which is based on up to 10 hours per day.

Many engineers are deployed to vessels in vehicles equipped with the necessary tools needed to deliver the service. If our engineers need to fly to the vessel, economy flights are selected by Flynn Refrigeration. If preferred, flights can be booked by yourselves on behalf of the engineer.

Where required, engineers can stay on board vessels. If separate accommodation is required, we can book this and simply add a 10% handling fee to the charges, and provide you with copies of receipts for all relevant expenses.

Mileage is charged at 65 pence (65p) per mile. A £40 allowance is also charged per day, per engineer to cover subsistence.

Request for Servicing

If you would like us to attend your vessel, please complete the 'Job Specification' document.

Once received, we will review your requirements and provide you with a working plan, including the number of days required to travel, and the number of days we expect our engineer to be deployed for. Please note: the number of days are given as a guide only. Accurate timescales will be confirmed following identification of problems/issues and all matters have been discussed with yourselves, and relayed through our team.

We want to provide you with a cost-effective service, and ensure that all work is delivered and completed by trained specialists as quickly as possible.

When you need us to provide an engineer, all arrangements are carried out and monitored by our in-house specialist who will keep you informed at all stages, whilst supporting our service engineer.

Servicing Rates

	Per Day		Per Hour
Standard Service	750 GBP up to 10 hours	Standard Service Overtime	85 GBP
Top Level Specialist Trouble-Shooter	1000 GBP up to 10 hours		
Assistant Engineer	450 GBP up to 10 hours	Assistant Engineer Overtime	50 GBP

* Engineers' time is charged from leaving office/starting destination to the time they return back to office/end destination, and includes travel time

** We request that ship's staff are available and willing to assist as and when required for lifting heavy goods, welding and any electrical work that may be required

*** When possible, please ensure that the vessel has the suitable service tools such as vacuum pumps, refrigerant recovery units and reclaim cylinders, leak detectors and spare refrigerant. We also suggest that Nitrogen and a Nitrogen regulator is available on board to avoid making arrangements for local supply once work has begun. If you would like further information on refrigeration service tools, please let us know
